

Welcome to the code and dataset for Miles Nesbit's 2020 EEC MRes thesis: "Deviation of growth rate and carrying capacity constraints from the metabolic theory of ecology in prokaryotes." All code is written in R. The pertinent information is all in the Formatted file under results. All code is labelled under the file code. The absolute most relevant information is located outside the datafiles under "1_Full_Analysis", "DataSetRVK", and "Total_processed." Thank you for taking the time to look at my hard work behind the scenes.

~Miles Nesbit
